

Specimen no.	Collection	Species	Genus	Family	Order	Class	Age	ID by		
SS1203	Unknown		Fungia	Fungiidae	Scleractinia	Hexacorallia	Recent	Anupama Chandroth	Solitary, disc shaped, dominant central moth, do not see specific septal arrangement, but there are 3 small septa between each big ones.	
1	Unknown		NA	Faviidae	Scleractinia	Hexacorallia	Recent	Anupama Chandroth	Polygonal shape, sharp edges, 12 septa, compactly packed corallites, 3-7 mm, all the septa converges at the center	
2	Unknown		NA	Faviidae	Scleractinia	Hexacorallia	Recent	Anupama Chandroth	Irregular shaped corellite to angular, relatively large corellite, 6-9 mm, well developed columella, small, large alternating cycle, prominent groove and tubercle structure	
3	Unknown	Oculina sarastona	Oculina	Oculinidae	Scleractinia	Hexacorallia	Plio-Pleistocene	Anupama Chandroth	Columar structure, spaced randomly arranged corallites, 3-4 mm diameter, alternating septa, with larger one merging in the center, costae is faint. Ref: PRI
